

ITC HOTELS
RESPONSIBLE LUXURY

MILESTONE PROJECT

Objective & Data Overview

The company wants to gain deeper insights into its overall financial performance, customer booking behavior, occupancy trends, and room category performance to optimize revenue generation, minimize cancellations, and enhance customer satisfaction. The goal of this project is to create an interactive, multi-page Power BI dashboard to provide stakeholders with real-time insights for decision-making.

Time Period Covered:

May 2022 to July 2022

Problem Statement

ITC Hotels, a premier luxury hotel chain, operates multiple properties with varied room categories and fluctuating occupancy rates. Despite a strong brand presence, the company faces challenges in:

- ❖ Understanding real-time revenue performance across properties and room types.
- ❖ Tracking and minimizing booking cancellations and lost revenue Analyzing customer behavior such as booking patterns and stay durations.
- ❖ Aligning occupancy trends with pricing and operational decisions.
- ❖ ITC Hotels lacks a centralized, interactive platform to monitor key performance indicators (KPIs) and generate actionable insights from booking and occupancy data.

Key Metrics

- ❖ **Revenue (₹1.71bn)** – Strong overall revenue performance across ITC hotels.
- ❖ **ADR (₹14.92K)** – Consistent average daily rate, reflecting stable pricing strategy.
- ❖ **ADR by Date** – Fluctuates between ₹14.6K–₹15.2K, indicating pricing is flexible but relatively stable.
- ❖ **RevPAR (₹7.35K)** – Occupancy-adjusted revenue indicates mid-level capacity utilization.
- ❖ **RevPAR by Date** – Oscillates between ₹6K–₹10K, suggesting occupancy variability more than pricing drives revenue shifts.
- ❖ **MoM Growth (50.29%)** – Significant monthly revenue growth shows strong recovery momentum.
- ❖ **WoW Growth (1395.05%)** – +1395.05% spike (week 19, due to zero base) – normalized afterwards.
- ❖ **Revenue by Property Name** – Exotica leads with ₹320M, Palace close behind at ₹304M, while Seasons lags at just ₹66M.
- ❖ **Revenue by Room Category** – Elite generates the largest share (32.79%), followed by Premium (27.05%), Presidential (22.05%) and Standard (18i.12%).
- ❖ **Revenue by City** – Mumbai dominates with ₹476M, followed by Delhi (₹295M) and Bangalore (₹266M); Goa contributes the least at ₹125M.
- ❖ **Moving Avg Revenue (May-July)** - The moving average reveals a consistent and concerning downward trend from May to July.

Key Insights:

1. Elite rooms and Mumbai city are the top revenue drivers, establishing clear high-value segments.
2. Goa and ITC Seasons underperform, pointing to untapped potential or weak demand.
3. While revenue shows high daily volatility, the moving average reveals a consistent and concerning downward trend from May to July.
4. ADR & RevPAR show cyclical spikes → demand strongly tied to recurring short cycles (likely weekend/weekday).
5. WoW growth spike in week 19 was artificial (due to zero base), after which growth normalized.

Key Takeaway:

1. Investigate the steady decline in revenue since May → identify causes (seasonality, cancellations, pricing, competition).
2. Maximize peak periods (weekends/bi-weekly demand) with dynamic pricing, special offers, and event-driven campaigns.
3. Capitalize on Elite category & Mumbai market, as they are clear revenue leaders.
4. Address underperformers (Goa, ITC Seasons property) with localized promotions, partnerships, and occupancy-boosting initiatives.
5. Stabilize demand during weekdays through corporate tie-ups, long-stay offers, or bundled packages to smooth cyclical revenue.

City

All

Months

All

WeekNum

All

Key Metrics

- ❖ **Total Occupancy (101K)** – Strong occupancy volume, indicating healthy guest inflow across properties.
- ❖ **Occupancy Rate (43.50%)** – Less than half of available capacity is being utilized, showing significant room to improve efficiency.
- ❖ **MoM Occupancy Growth (50.64%)** – Sharp month-over-month improvement, signaling strong recovery momentum.
- ❖ **WoW Occupancy Growth (1386.92%)** – Extremely high growth week-on-week, suggesting sudden surge in demand or seasonality.
- ❖ **Total Occupancy by Property Name** – ITC Exotica, Palace, and City lead with ~18K occupancy each, while ITC Grands lags behind at 13K.
- ❖ **WoW Occupancy Growth Table** – High volatility with weeks showing both double-digit growth and decline, pointing to fluctuating demand.
- ❖ **MoM Occupancy Growth Chart** – June dipped (-4.97%), but July rebounded with positive growth (+3.94%).
- ❖ **Capacity & Occupancy by Room Category** – Elite rooms dominate with 37K capacity and highest occupancy, while Presidential has lowest uptake.
- ❖ **Occupancy by Date & Day Type** – Weekends outperform weekdays consistently, showing leisure-driven demand patterns

Key Insights:

1. Occupancy volumes are strong but capacity utilization is relatively low (43.5%), meaning there is untapped potential.
2. Demand recovery is evident with strong MoM and WoW growth, but volatility indicates sensitivity to external factors (season, events, pricing).
3. Premium properties (Exotica, Palace, City) capture majority of stays, suggesting brand positioning matters.
4. Room category analysis shows customer preference for Elite and Standard rooms, with Presidential category underperforming.
5. Weekend stays are consistently higher, confirming demand is more leisure-driven than corporate.

Key Takeaways:

1. Focus on improving occupancy rate despite high total volumes.
2. Target underperforming properties (e.g., ITC Grands) with marketing or promotions.
3. Optimize pricing & packages to stabilize volatile WoW growth.
4. Promote lower-performing room categories like Presidential with bundled offers.
5. Leverage weekend demand by creating tailored leisure packages.
6. Continuous tracking of seasonal and weekly patterns will help forecast better and reduce volatility.

Revenue and Total Occupancy by Booking Leadtime

ALOS by Room Category

MoM Rev Growth by Months and Room Category

WoW Rev Growth by WeekNum and Room Category

Revenue by Room Category

Key Metrics

- ❖ **Average Leadtime (3.71 days)** – Guests tend to book very close to stay dates, showing last-minute booking behavior.
- ❖ **Running Total (₹2.01bn)** – Strong cumulative revenue performance to date.
- ❖ **ALOS (2.37 nights)** – Guests typically stay for short durations, around 2–3 nights.
- ❖ **TOPN RC by Revenue (Elite)** – Elite category leads revenue generation, proving its popularity and pricing strength.
- ❖ **Revenue & Occupancy by Booking Leadtime** – Majority of revenue and occupancy come from near-zero lead time bookings, confirming impulsive or short-notice demand.
- ❖ **ALOS by Room Category** – Premium has the highest average stay length (2.41 nights), while Presidential has the lowest (2.31 nights).
- ❖ **MoM Rev Growth by Room Category** – Revenue dipped in June across categories but bounced back sharply in July, led by Elite and Premium rooms.
- ❖ **WoW Rev Growth by WeekNum** – Extremely volatile early weeks (up to +500%), then stabilizes near flat, suggesting early surge was event/season driven.
- ❖ **Revenue by Room Category** – Elite dominates revenue at ₹560.27M, followed by Premium (₹462.17M), Standard (₹376.75M), and Presidential (₹309.58M).

Key Insights:

1. Bookings are highly last-minute with very short average lead time, requiring agile inventory and pricing strategies.
2. Short stays (ALOS ~2.37 nights) dominate, reflecting business travel or short leisure trips.
3. Elite rooms are the top revenue driver, confirming strong demand for higher-value categories.
4. Revenue growth is volatile, with June showing a dip and strong rebound in July, highlighting seasonal/cyclical demand.
5. Premium category not only brings longest stays but also contributes significant revenue, making it an important segment to nurture.
6. Presidential rooms underperform both in stay length and revenue, needing repositioning or promotional strategies.

Key Takeaways:

1. Revenue strength is led by Elite & Premium rooms, while Presidential underperforms.
2. Demand is impulsive (low lead time) → optimize real-time pricing & dynamic offers.
3. Short stay patterns (ALOS ~2.3) → packages for upselling longer stays may unlock growth.
4. Volatility in monthly/weekly revenue → requires demand forecasting and marketing pushes during low months.
5. Category strategy: strengthen Elite & Premium offerings while improving Standard & Presidential through targeted campaigns.

₹ 298.77M

WoW Cancellation Growth

1415.65%

Cancellation Rate by Property Name

Cancellation Rate by Date

MoM Cancellation Rate by Months

WoW Cancellation Rate by WeekNum

Cancellation Rate by Room Category

Key Metrics

- ❖ **Cancellation Rate (24.83%)** – Almost one in four bookings is cancelled, highlighting a major leakage in confirmed occupancy.
- ❖ **Cumulative Cancellations (33K)** – Large volume of cancellations, impacting operational planning.
- ❖ **Lost Revenue by Cancellations (₹298.77M)** – Substantial revenue erosion due to cancellations, directly hurting profitability.
- ❖ **WoW Cancellation Growth (1415.65%)** – Sudden surge in weekly cancellations, suggesting external triggers (seasonality, policy changes, or guest behavior shifts).
- ❖ **Cancellation Rate by Property Name** – ITC Palace (25.18%) and Grands (25.08%) face the highest cancellation burden, while Blu (24.65%) fares slightly better.
- ❖ **Cancellation Rate by Date** – Fluctuates between 22%–28%, showing inconsistent booking reliability.
- ❖ **MoM Cancellation Rate by Months** – June saw a slight increase (+0.57%), while July improved with a decline (-2.51%).
- ❖ **WoW Cancellation Rate by WeekNum** – Volatile, with weeks swinging between +3.38% increase and -3.12% decrease.
- ❖ **Cancellation Rate by Room Category** – All room categories face cancellations around ~24–25%, indicating issue is widespread and not category-specific.

Key Insights:

1. High cancellation rate (~25%) poses a significant revenue leakage risk.
2. Cancellation trends are volatile, driven by both seasonal and week-to-week fluctuations.
3. Certain properties (Palace, Grands) are more exposed to cancellations, requiring focused intervention.
4. Lost revenue (~₹299M) is a major business concern, equivalent to a substantial share of potential earnings.
5. July shows some improvement in cancellation control, indicating corrective actions may be working
6. Since all room categories are equally affected, root causes are likely policy- or customer-driven, not room preference.

Key Takeaways:

1. Urgent need to reduce cancellations to protect ~25% of potential revenue.
2. Targeted strategies for high-cancellation properties (Palace, Grands) should be prioritized.
3. Strengthen booking policies (advance deposits, stricter cancellation terms, or flexible rebooking options).
4. Improve forecasting by incorporating cancellation patterns into demand planning.
5. Analyze customer behavior & booking channels to identify root causes of high cancellations.
6. Continuous monitoring can sustain July's positive improvement trend.

Overall Suggestions Across All Dashboards

- ❖ Stabilize revenue and occupancy trends by reducing dependence on weekend peaks and driving consistent weekday demand through corporate tie-ups, long-stay offers, and events.
- ❖ Leverage high-performing segments (Elite & Premium categories, Mumbai/Delhi/Bangalore markets) with loyalty initiatives, upselling, and premium positioning to secure stable revenue.
- ❖ Revitalize underperforming areas such as Goa, ITC Seasons, and Presidential/Standard categories through targeted marketing campaigns, bundled offers, and product repositioning.
- ❖ Reduce revenue leakage from cancellations (~25%) with tiered cancellation policies, flexible rebooking options, and monitoring of high-risk booking patterns.
- ❖ Improve capacity utilization by optimizing distribution channels, applying real-time dynamic pricing, and offering package deals to lift occupancy beyond the current ~43–45%.
- ❖ Adopt data-driven revenue management with forecasting models to predict demand, manage volatility, and anticipate cancellations more accurately.
- ❖ Balance customer- and profit-centric approaches by encouraging longer stays (beyond the 2–3 nights ALOS) with loyalty packages, advance booking discounts, and targeted upsell opportunities.
